☑ Dictation (to be transcribed)

☑ Noise Cancellation

## Automatic dictation routing/workflow

☑ **Dictation transfer via LAN, FTP or E-mail** Mobile and desktop dictation only play to their strengths if the dictations get to the right destination, quickly and easily. For every user scenario automatic transfer rules can be defined. Depending on the defined rules (work type, author ID etc.) the dictations are transferred (via email, FTP, LAN etc.) to its destination.

☑ Playback of several audio codecs (DSSPro, DSS, WAV, WMA, MP3)

☑ Playback of encrypted DSSPro files (particular password needed)

## Data security is priority number one

☑ Because your data is your asset, ODMS protects your data with several security features. Instant 256-bit file encryption with DSS Pro secures your dictations and allows only authorised persons to listen to them. Customisable backup rules avoid any accidental data loss.

## Designed for excellent usability

☑ New and improved interface design for excellent usability. The user interface is an important component of professional dictation hardware and can boost your productivity and efficiency.

## Seamless interface to speech recognition*

☑ Support of several Dragon NaturallySpeaking user profiles

☑ Several author IDs can be linked to particular user profiles of Dragon NaturallySpeaking so that the dictations are automa tically going to be pre-transcribed.

The typist just needs to double check the document. In case corrections are needed and made the author's speech recognition profile is trained as well.

*Compatible Speech Recognition software must be purchased separately

Olympus Speech
Documentation Solutions
can offer a tailored solution
according to your organisations
requirements, streamlining
your work-flow, but above all
improving your efficiency.
